Color experts agree that one of the most amazing things about color is its close tie to emotions, making color extremely subjective. Many emotions, such as happiness and joy, can be evoked with different colors, and most of them come from our past experiences. That being said, our perceptions of mood-altering colors are somewhat subjective, too. In other words, everyone has their own happiness palette!

White

To the human eye, white is a bright and brilliant color that can cause headaches. In cases of extremely bright light, the color white can even be blinding.

Mango Yellow

Mangoes, too, go through the same process. The outsides of mangoes soften. They turn yellow from the inside out and develop a unique flavor and aroma.

Mint Green

Mint is a vibrant, light shade of green. Its name derives from the green plant mint. As green is a secondary color, in order to create mint green, you first need to make its base, color green.
